

Phantom Crystals

A phantom crystal appears ghostlike within the body of a larger crystal. A phantom has absorbed learning over aeons of time. It points the way toward personal growth and evolution.

The purpose of a phantom crystal is to stimulate healing for the planet and activate healing abilities in individuals. For this purpose, it connects to a spiritual guide and enhances meditation.

Phantoms enter larger crystals via a natural weakness in the outside of the crystal structure. This may be a small naturally occurring crack for example.

STONE FIEND

The Place Where stones Rock!
